## ProScan Max® III for Liquid & Viscous Applications

### ProScan Max® III Pipeline System

The ProScan Pipeline System (featuring the ProScan Max® III) metal detector is ideal for ice cream, soft cheese and ground meat applications. Advanced Detection Systems' focus on today's stringent food safety regulations is reflected in several standard features including: administrator assigned user names and log-in levels allowing users to abide by identity requirements, data logger access through a downloadable thumb

drive, running list of recent detection history visible from the menu and flexible automatic reject timing to ensure a reliable detect and reject process.

Food processors are encouraged to use Advanced Detection Systems' free product testing service. All product testing results are accompanied by Advanced Detection Systems' Sensitivity Guarantee.

#### Three-Way Divert Valve

removes metal contaminated product sanitarly and efficiently

#### Touchscreen

Intuitive software and controls are easy to navigate. Make quick changes without disrupting production.

### Get Detection Optimized for Your Process

Have your product tested in our factory lab, free of charge. The results are used to optimize your ProScan's® detection levels for your specific product. We stand by this method with a written guarantee.

## ProScan Max® III for Liquid & Viscous Applications

### ProScan Max® III Core Features and Technologies

#### Acculearn™ Technology

Setting up products with the Acculearn Technology is easy and efficient. In as few as 30 seconds to a minute, the metal detector will learn a product's signature, allowing clean product to pass through while accurately identifying and rejecting product that has metal contamination.

#### Guaranteed Sensitivity

We test your product and calibrate our detectors to your product's specific needs and guarantee sensitivity.

#### Patented Auto-Balance

The ProScan Max® III's auto-balance software maintains perfect coil balance and optimum performance, eliminating the cost of a service technician plant visit to re-balance the metal detector.

#### Patented Vibration Technology

Advanced Detection Systems' vibration technology monitors interference created by vibration and automatically compensates for the effect, thus enhancing reliability.

#### Custom Built

Our metal detectors are individually designed by our engineering staff and manufactured to your exact specifications.
